Test Conditions

Kitted reagents were tested on a NextSeq 550Dx sequencing system in a 2x38 cycle paired end run configuration with PhiX at a concentration which produced a cluster density of 160-230 K/mm^2. Flow Cells included in the kit lot were manufactured and released in accordance with production specifications.

Test Results

Metric	Specification	UOM	Result
Sequencing output	≥22.5	Gigabases	Pass
Cumulative Q-score[1] ≥30	≥80	%	Pass

[1] Q-Scores measure the probability that a base is called incorrectly. A higher quality score indicates a smaller probability of error. A quality score of 30 represents an error rate of 1 in 1000, with a corresponding call accuracy of 99.9%.
